

# Science for Patient Benefit

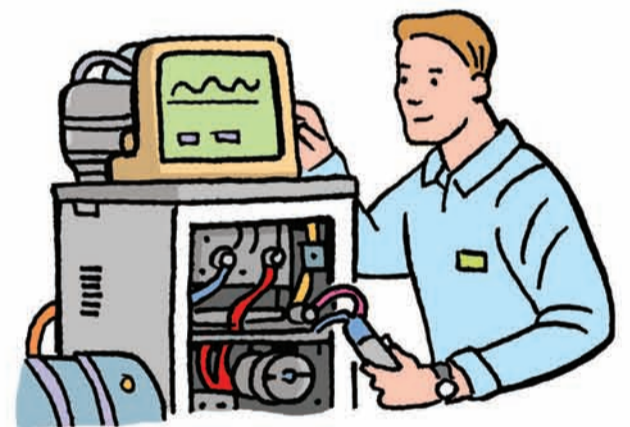

**DID YOU KNOW?**  
It takes at least two physicists to work out a safe treatment plan for your radiotherapy treatment.

**DID YOU KNOW?**  
Rehabilitation engineers design high-tech ways to make patients more comfortable and independent.

Without physics and engineering there would be no modern healthcare

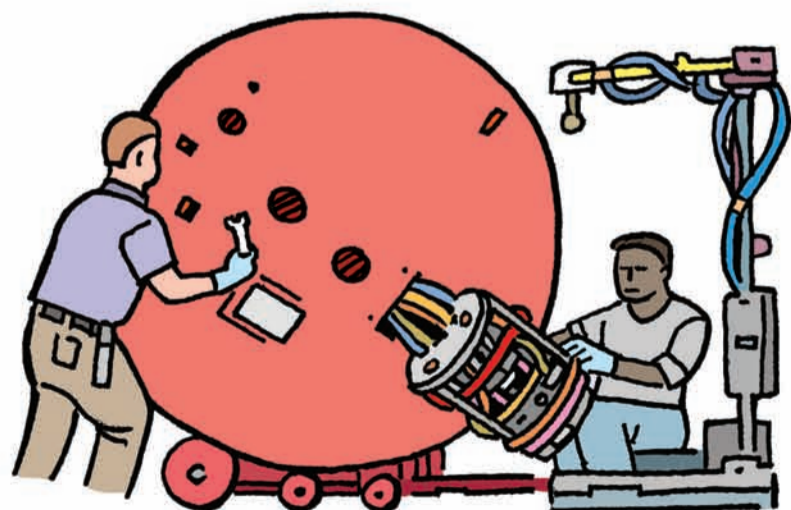

**DID YOU KNOW?**  
Teams of engineers and scientists check every machine in this hospital to keep them working properly.

**DID YOU KNOW?**  
Every piece of imaging equipment using x-rays is tested by a scientist to make sure it is safe.

**DID YOU KNOW?**  
A technologist is needed to perform some of the scans doctors use for your diagnosis.

**DID YOU KNOW?**  
Engineers and physicists in industry work together to develop the latest generation of radiotherapy treatment machines.
